

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

INTRODUCTORY LETTER.

MICHIGAN,
DEPARTMENT OF STATE,
Lansing, October 1, 1887. }

Hon. CYRUS G. LUCE,

Governor of the State of Michigan:

SIR: I herewith present the Eighth Annual Statistical Report of the Farms and Farm Products of Michigan.

The publication of this report has been greatly delayed, first by the vast amount of work required to compile and read the proof-sheets on the State census of 1884, which engaged nearly the entire regular statistical force of this office as well as extra clerks, previous to January 1 of the present year, and by the press of Legislative and other printing since that date.

Returns have been received from all the townships in the State except 40, of which 4 are in the southern four tiers of counties, viz: Coldwater in Branch county, Leslie in Ingham, Wyoming in Kent, and Crockery in Ottawa; 4 are in the central counties, viz: Pine River in Gratiot, Martiny in Mecosta, Montcalm in Montcalm, and Zilwaukee in Saginaw county; and 32 are in the northern counties. For most townships for which these statistics were not reported, the land statistics have been copied from last year's report, and the wheat and wool products estimated.

The present report embraces statistics of the farm products of the year 1885, and the land and live stock statistics of 1886.

The weather during the crop season of 1885 was generally favorable. The wheat plant at the beginning of the winter of 1884-5 was in a very satisfactory condition, and nothing occurred during the winter to seriously injure it. From about the middle of January to the first of April the ground was well covered with snow. In May the condition of wheat was placed at 101 per cent in the southern counties, and 99 per cent in the northern counties, the comparison being with vitality and growth of average years. The loss from

winter-killing of small patches on knolls and other exposed places was not greater than usual. Wheat and hay were both secured in good condition, and were of superior quality.

The rain-fall during the six months April-September, was abundant and fairly well distributed. In May there was a slight deficiency in some localities, but this was followed by copious rains early in June. The August temperature was below the normal, and fears were entertained that corn would not fully mature. In nearly every county in the southern section of the State the crop was considerably damaged by frosts between August 23 and September 14. As a result of these frosts the proportion of soft corn was much greater than usual.

The potato crop was greatly injured by the rot. According to the estimates of crop correspondents the total loss amounted to about one-fifth of the crop. The rot was general throughout the southern part of the State, and was reported from 19 of the northern counties. A few fields were ploughed up or abandoned. In many localities, however, and especially where grown on sandy soil, the crop suffered little injury from this cause.

SUMMARY AND COMPARATIVE STATEMENT.

As formerly we present a summary and comparative statement, as follows:

LAND IN FARMS.—The number of farms in the State is reported at 138,844, an increase of 3,737 as compared with the preceding year. The method of ascertaining the "number of farms" has been explained in former reports.

The total number of acres of improved land in farms is reported at 7,463,514, or 182,739 acres more than in 1885. The average size of farms is 89 and 63-hundredths acres, which is 32-hundredths of an acre less than in 1885.

The area of improved land in farms in the southern four tiers of counties is 5,928,079 acres, an increase over 1885 of 83,279 acres. The area in the northern counties is 1,535,435 acres, an increase of 99,460 acres over 1885.

WHEAT, 1886.—The wheat crop of 1886 was estimated by this Department in October to amount to 26,594,513 bushels. This estimate was based on the acreage in the spring of 1886, as reported by the supervisors, and the average yield per acre as shown by the records kept by threshers. In December 1886, the National Department of Agriculture estimated the Michigan wheat crop of that year at 26,572,000 bushels, or 22,513 bushels less than the estimate made in this office. The area, as estimated by the National Department, was 1,662,721 acres, or nearly 37,000 acres greater than the acreage as published in the Michigan Crop Report for July.

The average annual yield of wheat in Michigan during the eight years,

1878-1885, as shown by these reports, was 27,873,925 bushels. The total estimated yield in 1886 was more than one and a quarter million bushels less than the average annual yield for the eight years named.

WHEAT, 1885.—The number of acres of wheat harvested in 1885 was 1,525,510; number of bushels, 30,376,068, and average yield per acre, 19 and 91-hundredths bushels. The area harvested was 39,732 acres greater than harvested in 1884, and the average yield per acre was more than three bushels greater than in 1884, and nearly 5-eighths of a bushel greater than the average in 1879, which was the highest recorded for this State previous to 1885.

The aggregate product in the southern four tiers of counties was less than the estimate made by this Department in October, 1885, by 627,719 bushels, while in the northern counties it was greater than the estimate by 166,426 bushels. The aggregate product in the State was less than the estimate by 461,293 bushels. The yield per acre, obtained from threshers' records in October, 1885, was considerably in excess of the yield as now shown by the returns of supervisors. It was noticed at the time the estimate was made that the county averages ran high, and their possible inaccuracy definitely suggested in the following which is taken from the October, 1885, crop report:

"This is our final estimate of the wheat crop of 1885. It is believed to be as accurate as can be obtained at this date. Correspondents have secured the reports from threshings at great cost to themselves of time and labor. They have done all in their power to make the report accurate. If the average yield per acre in any case is too high it must be due either to an under-statement of acreage by farmers, or to a failure of the threshers to note down for all jobs the acres as well as the bushels threshed. The high averages in certain counties, particularly Genesee, Ingham, Lapeer, Livingston, and Shiawassee, suggest that the threshers' records were not in every case reliable, but all reasonable allowance for errors from this source will not reduce the aggregate product in the State below 30,000,000 bushels."

The yield of wheat per acre in 1885 in the southern counties averages 6-tenths of a bushel less than the estimate in the October, 1885, crop report, and for the State was less than the estimate by 7-tenths of a bushel.

The aggregate product exceeded 1,000,000 bushels in each of nine counties, viz: Calhoun, Clinton, Eaton, Genesee, Ionia, Jackson, Kalamazoo, Oakland, and Washtenaw.

The following is a list of the counties in each of which the aggregate product was 1,000,000 bushels or more in either of the years 1878-85, together with the annual yield in each:

Counties.	Bushels of Wheat Produced in—

The counties named in the above table produced a million bushels or more in the eight years, 1878-1885, as follows: Cass, Hillsdale and Lapeer, once ; Barry, Eaton, Livingston and St. Joseph, twice ; Genesee, three times ; Kent and Lenawee, four times ; Clinton and Ionia, five times ; Kalamazoo and Oakland, six times ; Calhoun and Jackson, seven times, and Washtenaw, eight times. The counties being of different areas the following table showing average yield per acre in each is published :

Counties.	Average for 8 years, 1878-85.	Average Yield of Wheat per Acre.							
		1885.	1884.	1883.	1882.	1881.	1880.	1879.	1878.

Livingston.....	17.99	22.21	17.16	15.19	21.54	12.81	17.94	17.24	20.49
Oakland.....	17.18	19.92	15.88	14.90	20.62	12.82	18.73	15.79	19.40
St. Joseph.....	14.67	15.97	14.78	16.48	13.15	5.50	18.06	19.00	14.80
Washtenaw.....	21.35	22.20	19.94	20.91	23.77	14.89	23.61	22.04	23.37

Comparing the counties in the above table, in 1878 the highest average yield per acre was in Ionia, and the second highest in Washtenaw; in 1879 the highest was in Clinton, second highest in Ionia, and third highest in Washtenaw. In each of the years 1880, 1881, 1882, 1883, and 1884, the highest was in Washtenaw, and in 1885 the highest was in Eaton. The average per acre for the eight years, shown in the first column, was highest in Washtenaw, second highest in Lenawee, third highest in Jackson and Clinton, etc. It will be noticed that in each county represented in the table, except Lenawee, the average per acre was greater in 1885 than the average for the eight years, 1878-85.

The wheat product of the 28 counties composing the southern four tiers, averaged, in 1885, 930,161 bushels for each county. The yield per acre averaged 20 and 28-hundredths bushels, and ranged from 15 and 97-hundredths bushels in St. Joseph to 23 and 82-hundredths bushels in Eaton. The average per acre was less than the average for the 28 counties in the southern division of the State in each of the counties of the first or southern tier, the west two counties of the second, third and fourth tiers, the east county of the second and fourth tiers, and the east two counties of the third tier. This leaves a single group of eleven counties, centrally situated, in each of which

FARM STATISTICS OF MICHIGAN, 1885-6.

the average per acre was greater than the average for the entire division. This group includes Calhoun, Jackson and Washtenaw in the second tier, Eaton, Ingham and Livingston in the third tier, and Ionia, Clinton, Shiawassee, Genesee and Lapeer in the fourth tier of counties.

The aggregate yield of wheat exceeded 100,000 bushels in each of fourteen townships in the State, viz: Bertrand and Niles in Berrien; Albion, Eckford, and Marengo in Calhoun; Bengal, Dallas and Westphalia in Clinton; Lyons in Ionia; Concord, Parma, Pulaski, and Spring Arbor in Jackson, and Lima in Washtenaw county.

The number of townships that produced more than 100,000 bushels in 1884 was three; in 1883, five; and in 1882, thirty-five.

The following table shows for the years 1885 and 1884 the wheat statistics of each of the southern four tiers of counties, counting in order from the south line of the State:

Tiers of Counties.	1885.			1884.		
	Acres.	Bushels.	Average yield per acre in bushels.	Acres.	Bushels.	Average yield per acre in bushels.
First	309,623	5,558,396	17.95	306,750	5,002,348	16.31
Second.....	321,740	6,835,403	20.62	308,869	5,705,254	18.41
Third.....	313,128	6,481,983	20.70	307,752	5,232,243	17.00
Fourth.....	339,527	7,368,715	21.70	329,002	5,520,718	16.78
Totals and averages.....	1,284,018	26,044,497	20.28	1,253,873	21,460,563	17.12

The acreage and yield per acre in each tier was greater in 1885 than in 1884; the yield per acre in 1885 was greater in the second tier than in the first, greater in the third tier than in the second, and in the fourth than in the third, and the average in each of the second, third, and fourth tiers in 1885 was greater than the average for the 28 counties composing the southern four tiers. The average for the eight years 1878-85 was 16 and 52-hundredths bushels in the first tier, 18 and 53-hundredths bushels in the second tier, 17 and 49-hundredths bushels in the third tier, and 17 and 82-hundredths bushels in the fourth tier.

The following table shows for the southern four tiers of counties, and for the counties north of the southern four tiers, the acreage, the yield in bushels, and the average yield per acre of wheat in each of the years 1876-1885; also for each section and for each year, the per cent of acreage to the total acreage of wheat in the State, and the per cent of yield to the total yield in the State:

Years.	Wheat Product									
	Of the South Four Tiers of Counties.					Of the Counties North of South Four Tiers.				
	Acres.	Per Cent of Acreage in State.	Yield in Bushels.	Per Cent of Yield in State.	Average Yield per Acre.	Acres.	Per Cent of Acreage in State.	Yield in Bushels.	Per Cent of Yield in State.	Average Yield per Acre.
1885.....	1,284,018	84.17	26,044,497	85.74	20.28	241,492	15.83	4,831,571	14.26	17.94

1876.....	1,108,929	90.25	15,488,389	91.73	14.03	119,283	9.75	1,886,790	8.27	11.71

The wheat acreage of the southern four tiers of counties in 1885 was 84 and 17-hundredths per cent of the total wheat acreage, and the yield 85 and 74-hundredths per cent of the total yield in the State. The yield per acre in the southern counties was the highest ever grown, and in the northern counties the yield per acre has been exceeded only in 1877 and 1882.

Average annual acreage of wheat in the counties north of the southern four tiers in the years 1876-85.....	216,241
Average annual yield of wheat in the counties north of the southern four tiers in the years 1876-85.....	3,826,229
Average annual yield of wheat per acre in the counties north of the southern four tiers in the years 1876-85.....	15.38

CORN.—The area in corn in 1885 is reported at 851,334 acres, and the yield at 50,983,110 bushels, an average of 59 and 89-hundredths bushels of ears, or about 30 bushels of shelled corn, per acre. Compared with 1884 there is an

increase of 48,346 acres, of 3,528,975 bushels, and of nearly four-fifths of a bushel of ears per acre.

The largest corn crop ever shown in these reports was in 1882, when the area was 879,949 acres, the yield 56,929,495 bushels of ears, and the average per acre about thirty-two bushels of shelled corn.

OATS.—The number of acres of oats produced in 1885 was 762,391; number of bushels, 27,589,567; average per acre, 36 and 19-hundredths bushels. This was the best oat crop ever grown in the State. The area was greater than in 1884 by 44,537 acres, the aggregate yield was greater by 1,758,042 bushels, and the average per acre by more than one-fifth of a bushel. The aggregate product was more than double the product reported for 1878, and only 240,000 bushels short of double that for 1880.

CLOVER SEED.—The number of acres of clover seed harvested in 1885 was 183,650, a decrease of 44,873 compared with 1884; the number of bushels produced was 262,897, and the average per acre 1 and 43-hundredths bushels. The average per acre was 14-hundredths of a bushel greater than in 1884, and is the highest ever reported, except in 1879 when it reached 1 and 61-hundredths bushels. The 1879 clover seed crop was the largest ever grown in the State, the yield being 313,063 bushels, from 194,399 acres.

BARLEY.—The number of acres of barley harvested in 1885 was 43,089, an increase of 2,645 acres compared with 1884. The total yield was 1,093,624 bushels, and the average per acre 25 and 38-hundredths bushels.

PEAS.—The number of acres of peas harvested in 1885 was 66,896, an increase of 24,367 acres as compared with 1884. The total yield was 1,290,779 bushels, and yield per acre 19 and 29-hundredths bushels.

POTATOES.—The number of acres of potatoes raised in 1885 was 136,746, or 1,912 acres less than the acreage in 1884, which was the largest ever reported. The total yield was 13,942,394 bushels, as compared with 14,548,737 bushels produced in 1884, and the yield per acre nearly 102 bushels, or 2 and 90-hundredths bushels less than in the preceding year.

HAY.—The number of acres of hay raised in 1885 was 1,399,841, number of tons 1,699,790, average number of tons per acre 1 and 21-hundredths. The acreage and the aggregate yield exceeded the acreage and yield in 1884, while the average per acre was the same as in the preceding year.

SHEEP AND WOOL.—The number of sheep sheared in 1885 was 2,365,085, or 88,812 less than sheared in 1884. The annual increase in the number of sheep sheared in the years 1878-84, both inclusive, has been as follows:

In 1879, 9 and 4-tenths per cent; in 1880, 7 and 5-tenths per cent; in 1881, 8 and 7-tenths per cent; in 1882, 4 and 9-tenths per cent; in 1883, 5 and 96-hundredths per cent, and in 1884, 3 and 3-tenths per cent; but in 1885-

the decrease amounts to 3 and 62-hundredths per cent of the number sheared in 1884. The number of pounds of wool sheared in 1885 was 13,344,596, as compared with 13,827,542 pounds in 1884, and 13,373,803 pounds in 1883. The average per head was 5 and 64-hundredths pounds.

The number of sheep reported on hand in the spring of 1886 was 2,128,937.

HORSES, CATTLE, AND HOGS.—The number of horses in the State in the spring of 1885 was 349,695; milch cows, 358,453; cattle other than milch cows, 392,681; hogs, 509,290. Compared with 1885 there was an increase of 6,968 in the number of horses, of 10,041 in the number of milch cows, of 12,700 in the number of cattle other than milch cows, and of 21,987 in the number of hogs. Only live stock six months old and over is included in the report. As in previous reports, the totals do not, as a rule, include live stock in cities.

FRUIT.—The number of acres in apple orchards in the spring of 1886 is reported at 229,253, and the number of acres in peach orchards at 11,719.

The following quantities of fruit are reported as sold in the year 1885:

Apples, 3,602,851 bushels; peaches, 84,140 bushels; grapes, 3,671,170 pounds; cherries, currants, plums, and berries, 276,785 bushels.

COMPARATIVE STATEMENT.

The following table shows the State totals of certain products in 1885, and the averages of the corresponding totals for the years 1878, 1879, 1880, 1881, 1882, 1883, 1884, and 1885 :

	1885.	Average of 1878-1885.
Wheat—acres harvested	1,525,510	1,615,109
Wheat—bushels raised.....	30,376,068	27,873,925

Wool—average number of pounds per head	5.64	5.51
Apples—bushels sold.....	3,602,851	2,978,170
Peaches—bushels sold.....	84,140	188,022
Grapes—pounds sold.....	3,671,170	2,577,417
Cherries, currants, plums, and berries—bushels sold.....	276,785	178,402

In 1885 the area of wheat harvested was 89,599 acres less, and the yield per acre of hay was 1-hundredth of a ton less, than the average for the eight years 1878-85. With these exceptions the acreage, the aggregate yield, and the yield per acre of each of the crops named in the table were greater in 1885 than the average for the eight years. The excess of yield per acre was as follows : Wheat, 2 and 65-hundredths bushels; corn, 6 and 38-hundredths bushels; oats, 2 and 61-hundredths bushels; clover seed, 15-hundredths of a bushel; barley, 3 and 33-hundredths bushels; peas, 2 and 18-hundredths bushels; and potatoes, 10 and 64-hundredths bushels.

The number of sheep sheared in 1885 exceeded the average for the years 1878-85 by 235,467; pounds of wool by 1,615,515, and average per head by 13-hundredths of a pound. Compared with the average for the same years the quantity of apples reported sold in 1885 was greater by 624,681 bushels; of grapes by 1,093,753 pounds, and of cherries, currants, plums, and berries by 98,383 bushels, while the quantity of peaches reported sold was less by 103,882 bushels.

The following table shows the number of acres in all and in each of the crops named, in the year 1885, and the per cent of acres in each crop to the total number of acres in all crops, and also to the total number of acres of improved land :

	Number of acres in all and in each of the crops named.*	Per cent of acres in all and in each crop to total number of acres in all crops.*	Total number of acres of improved land	Per cent of acres in all and in each crop to total number of acres of improved land.*

Potatoes.....	186,380	2.85	1.83
Hay.....	1,396,779	29.24	18.75

* Exclusive of cities.

Expressed approximately, of the total acreage in the seven crops, wheat, corn, oats, barley, peas, potatoes, and hay, one-third was in wheat, one-sixth in corn, one-sixth in oats, three-tenths in hay, and one-thirtieth in potatoes; and of the total acreage of improved land, one-fifth was in wheat, one-ninth in corn, one-tenth in oats, and one-fifth in hay. Sixty-four per cent of the improved land in the State in 1885 was devoted to the production of these seven crops, leaving thirty-six per cent in pastures, orchards, gardens, etc. The area in the seven crops was greater than in 1884 by 191,421 acres, divided as follows: Wheat, 39,765 acres; corn, 48,249 acres; oats, 44,583 acres; barley, 2,631 acres; peas, 24,386 acres; and hay, 33,689 acres. The area in potatoes was 1,882 acres less than in 1884.

APRIARIAN STATISTICS.

At the session of the Legislature of 1885 a law was passed making it the duty of the supervisors and assessors to collect the apriarian statistics of the State at the time of taking the assessment each year, and providing that such statistics should be annually published in the Farm Statistics. Table VI. beginning on page 202 of this abstract, gives the totals of the first reports under this law.

The statistics are evidently very incomplete, but probably no more so than is usual with first reports.

The number of colonies in the fall of 1885 is returned at 38,862, and number at time of taking the assessment at 31,242, a decrease of 7,620 colonies, or nearly one-fifth of the number at the beginning of winter.

The number of colonies wintered in cellar is returned at 13,666; in chaff hives at 14,157; with no protection at 7,693, and for 3,346 colonies the manner of wintering is not reported. The reports do not shew the loss by the different methods of wintering.

The returns show that in 1885 32,719 colonies produced 562,845 pounds of comb honey; 15,236 colonies produced 224,745 pounds of extracted honey, and 16,605 colonies produced 13,535 pounds of wax. The total amount of comb and extracted honey produced was 787,590 pounds. The amount of honey produced in 1883, as returned in the State census of 1884, was 1,265,-445 pounds, and amount of wax, 29,863 pounds.

The only counties in the State returned as having more than 2,000 colonies in the fall of 1885, are Allegan, Kent, and Van Buren, and these, together with Berrien, Cass, Eaton, Ionia, Lapeer, Lenawee, Montcalm, and Oakland are the only ones returned as having more than 1,000 colonies.

INTRODUCTORY LETTER.

xvii

RELATION OF LIVE STOCK TO WHEAT PRODUCTION.

EXHIBIT.—For certain counties in Michigan the Number of acres of Improved Land in 1884; the Number of acres of Wheat harvested in 1885, and Number of Cattle and Sheep in 1884, to each 100 acres of Improved Land in 1884, and the average Yield of Wheat per acre in 1885.

Calhoun.....	235,045	29.08	20.86	13.80	7.56	45.91

The foregoing exhibit is exclusive of all cities, and also of townships from which no report has been received of either the acreage of improved land,

the acreage and yield of wheat, or the number of cattle and sheep. In these comments comparison is made in each case with the column showing "Number of cattle and one-eighth number of sheep," eight head of sheep being considered equal to one of cattle for manorial purposes.

This exhibit (the seventh published in these reports) is published for the purpose of affording the best data available for studying the importance of live stock to crop production. The counties are arranged in the order of acreage in wheat to each one hundred acres of improved land, those in which the proportion of the improved land in wheat was least being placed first. It is a curious and suggestive fact that, beginning with Kent, in which the area in wheat was exactly one-fifth of the total area of improved land in the county, and comparing with the figures for each county those for the county next following, wherever there is a change either to a greater or less number of cattle and sheep, there is a like change in the average yield of wheat per acre. For example, the number of cattle and sheep to each one hundred acres of improved land is five more in Genesee than in Kent, and the yield of wheat per acre is more than four bushels greater in the former than in the latter county. Comparing Lapeer with Genesee there is a less number of cattle and sheep in the former than in the latter county, and the yield of wheat is also less. Comparing Berrien with Lapeer shows a less number of cattle and sheep and a lower yield of wheat. Comparing Livingston with Berrien, both the number of cattle and sheep, and the yield of wheat, are found to be greater in the former than in the latter county, and so to the end of the table, with a slight exception in the case of Jackson compared with Ionia.

It is also noticeable that the highest yield of wheat per acre is in Eaton county, where the number of cattle and sheep to each one hundred acres of improved land is highest, while the lowest yield per acre is in St. Joseph county, where the number of cattle and sheep to each one hundred acres of improved land is lowest.

Comparing the groups with each other the number of cattle and sheep to each one hundred acres of improved land is substantially the same. The average yield of wheat per acre for group II is about one and one-fourth bushels greater than for group I, and the proportion of improved land in wheat is very much greater in the second than in the first group. In this respect the figures in this exhibit agree very closely with those published in the reports for 1883-4 and 1884-5, that is, each of the exhibits referred to shows a larger average yield of wheat per acre in the second than in the first group of counties.

THE RELATIVE PROPORTION OF THE DIFFERENT CLASSES OR GRADES OF FARMERS.

The average yield of wheat per acre in the years 1884 and 1885, figured by farms, for the southern four tiers of counties, furnishes the figures for the first two columns in the following statement. The last five columns are copied from former reports for purpose of comparison :

Average Yields per Acre Classified.	Per Cent of the Whole Number of Farms for which Average per Acre was figured.						
	1883.	1884.	1883.	1882.	1881.	1880.	1879.
Under 5.....	2%	2%	2%	1	4%	1	2%
5 to 10.....	4	7%	15%	5%	24%	7%	3
10 to 15.....	16%	27%	32	19	38%	22%	16
15 to 20.....	27	33%	27	25%	23	31	29
20 to 25.....	30%	22%	16%	28	9	26%	32
25 to 30.....	15%	6%	4%	15	1%	9	14
30 to 35.....	5%	1%	1	5	4-10	2	4
35 to 40.....	1	2%	2%	1	1-10	2%	2%

The figures in the column for 1885 show that on one farm in two hundred (one-half per cent of the farms) the yield per acre was less than 5 bushels; on four farms in a hundred the yield was 5 to 10 bushels, and so on for the remainder of this and for the other columns.

When the wheat crop is light the proportion of the farmers who raise the lower yields is greater than when the crop is heavy. The number of farmers in each one hundred who raised less than twenty bushels per acre in the years represented in the table ranges from 88 in 1881, the year of lowest yield, to 47 in 1885, the year of highest yield. In the following exhibit the years are arranged in the order of average yield of wheat per acre, the year of lowest yield being placed first; the second line shows the average yield per acre, and the third line the number of farmers in each one hundred who raised less than twenty bushels per acre. It will be noticed that with each increase in the average yield there is a decrease in the number of farmers:

Years arranged in order of average yield of wheat per acre.....	1881.	1883.	1884.	1880.	1882.	1879.	1885.
Average yield of wheat per acre, bushels.....	12.19	15.39	17.12	17.94	19.43	19.64	20.28
Number of farmers in each 100 who raised less than 20 bushels per acre.....	88	77	69	62	51	48	47

Considering the yield in each case, as above expressed, as a single quantity, thirty-five to forty bushels being the highest yield, the following is a fair showing for the seven years:

- On $\frac{1}{2}$ farm in 100 the average per acre is the highest.
- On 3 farms in 100 the average per acre is $\frac{1}{2}$ of the highest.
- On 9 farms in 100 the average per acre is $\frac{2}{3}$ of the highest.
- On 24 farms in 100 the average per acre is $\frac{5}{8}$ of the highest.
- On 28 farms in 100 the average per acre is $\frac{1}{2}$ of the highest.
- On 24 farms in 100 the average per acre is $\frac{5}{8}$ of the highest.
- On 10 farms in 100 the average per acre is $\frac{1}{4}$ of the highest.
- On $1\frac{1}{2}$ farm in 100 the average per acre is $\frac{1}{2}$ of the highest.

It would, of course be the same thing to say that one farmer in two hundred raises the highest yield per acre, three farmers in a hundred raise seven-eighths of the highest yield, etc. By adding the number of farms in the first four lines of the above statement ($\frac{1}{2} + 3 + 9 + 24$), it is found that nearly thirty-seven farmers in a hundred produce an average per acre greater than one-half the highest yield, while the number producing one-half the highest yield or less is sixty-three. The highest yield was produced by one-third as many farmers as the lowest.

Very respectfully,

GILBERT R. OSMUN,
Secretary of State.

TABLE 2.—*Totals of the Agricultural Statistics of the State, as shown by the Farm Statistics for 1881-2, 1882-3, 1883-4, 1884-5, and 1885-6.*

	Years.				
	1885.	1884.	1883.	1882.	1881.
Wheat—acres harvested.....	1,525,510	1,485,778	1,591,837	1,688,269	1,679,790
Wheat—bushels harvested.....	30,376,068	24,999,577	23,574,388	22,565,688	20,370,372
Wheat—average number of bushels per acre.....	19.91	16.83	14.81	19.29	12.13
Corn—acres harvested.....	851,334	802,988	760,544	879,949	773,594
Corn—bushels of ears harvested.....	50,983,110	47,454,135	16,514,076	56,829,493	40,989,187
Corn—average number of bushels of ears per acre.....	59.89	59.10	21.89	64.68	52.96
Oats—acres harvested.....	762,391	717,854	587,811	558,885	465,363
Oats—bushels harvested.....	27,589,567	25,831,525	19,271,182	19,025,761	15,352,444
Oats—average number of bushels per acre.....	36.19	35.98	32.79	31.01	32.95
Clover seed—acres harvested.....	183,650	228,528	120,579	138,334	242,588
Clover seed—bushels harvested.....	262,897	294,527	98,523	160,677	295,607
Clover seed—average number of bushels per acre.....	1.43	1.29	.78	1.18	1.22
Barley—acres harvested.....	43,069	40,444	38,507	39,060	26,545
Barley—bushels harvested.....	1,083,624	950,675	738,706	904,235	611,580
Barley—average number of bushels per acre.....	25.38	23.50	19.20	23.13	23.06
Peas—acres harvested.....	66,898	42,529	32,247	29,285	22,550
Peas—bushels harvested.....	1,290,779	851,410	435,230	489,591	381,892
Peas—average number of bushels per acre.....	19.29	20.01	13.49	16.57	16.89
Potatoes—acres harvested.....	136,746	138,658	122,976	113,745	93,238
Potatoes—bushels harvested.....	13,942,394	14,548,737	8,932,397	11,078,796	7,342,876
Potatoes—average number of bushels per acre.....	101.94	104.84	72.52	96.95	78.06
Hay—acres harvested.....	1,399,841	1,365,834	1,404,699	1,105,231	1,163,580
Hay—tons raised.....	1,699,790	1,648,665	1,872,188	1,365,252	1,381,615
Hay—average number of tons per acre.....	1.21	1.21	1.33	1.24	1.14
Sheep—number sheared.....	2,365,085	2,453,897	2,374,555	2,240,965	2,137,122
Wool—pounds sheared.....	13,344,596	13,827,512	13,373,803	12,737,343	11,576,755
Wool—average number of pounds per head.....	5.61	5.63	5.63	5.68	5.42
Apples—bushels sold.....	3,602,851	3,272,041	1,403,790	2,300,650	2,029,273
Peaches—bushels sold.....	84,140	67,610	199,952	295,394	106,850
Grapes—pounds sold.....	3,671,170	2,603,884	1,004,757	3,089,474	3,043,694
Cherries, currants, plums, and berries—bushels sold	276,785	191,491	152,044	189,638	147,853

a Acres in wheat in May, 1885, as shown by the preceding report.

b Obtained by multiplying the acres in wheat in May, 1885, as shown by the preceding report, by the average yield per acre in the townships of this county that have reported both the acreage and yield.

c Not reported, but an assumed acreage, equal to the acreage in May, 1886.

d Copied from the preceding report.
